Japanese Laid-Open Patent Publication No. 8-300965 discloses a front wheel and rear wheel drive vehicle in which an engine rotates one set of wheels and an electric motor rotates the other set of wheels. In this system, there is no mechanical connection between the front and rear wheels. Rather, the drive torque that is transmitted to each set of drive wheels must be adjusted relative to each other in order to keep the total drive torque constant. An English abstract of this publication is provided to better understand this reference. Also, U.S. Patent No. 5,788,005 is the corresponding U.S. equivalents, and thus, serves as an English translation of this publication.
